

Alerts & Notification Management

UPM Alerts enhance mobility for administrators by letting them easily display alerts to their users' and partners' devices when specific business events occur in the customers' UPM instance. UPM alerts utilize the connected aSaaS (adaptive SaaS) framework to set up localized alert templates that can be activated for most UPM modules against actions viz. Record Approval, Record Assignment, Record Creation, Record Modification, and Record Rejection, and sent over SMS, Email, and UPM Desktop Alerts.

Alerts Management

Alerts management enables UPM users to create and maintain alerts so end-users are promptly notified when needed. UPM's native functionality provides configurable business or ad-hoc alerts, including custom entities, and takes the form of email alerts.

Alerts (System Emails) lists are displayed with create, edit, delete, and search options. Users can view and respectively manage the metadata associated with the alert, the message recipients see when they receive the alert, and the alert assignment history, where advanced users also have the option of managing that history.

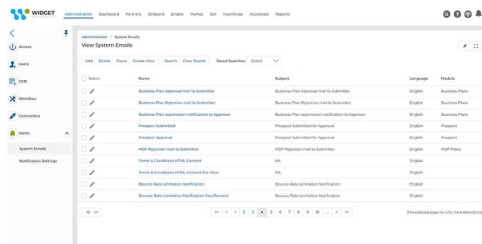

Key Features Includes:

- ✓ Manage Alert metadata
- ✓ Configurable alerts carriers
- ✓ Access assignment history

Manage Alert Mail Templates

Manage content of Mail Alerts, which you can utilize via Workflow Management to Schedule Alerts or send them out when a system/custom condition has been met. UPM Alerts let your users know when certain events occur in UPM or when you want to impart information to your users. For example, alerts let users know when they receive approval requests or when someone replies to a user’s comments.

UPM makes setting up alerts based on system actions easy, viz. Record Approval, Assignment, Record Creation, Record Modification, and Record Rejection respective to each module.

Key Features Include:

- ✓ Configurable to work with all UPM record types
- ✓ Create and manage multiple alerts and templates
- ✓ Integrated into UPM’s workflow engine
- ✓ Manage Localized Alert Versions
